Make missed follow-up work visible

Revenue leakage & lead recovery intelligence | Business operations portfolio

Question

Which enquiries need attention, who owns the next action, and can a repeatable process surface missed work?

758

synthetic records

13 documented KPIs

A reliable record before a reminder

Canonical PostgreSQL; normalized intake; conservative conflict review

Capture → validate → assign → prioritize → remind → review → measure

Sales associate: own and reschedule work

Manager: assign overdue work and balance capacity

Analyst: reconcile cohorts, denominators and evidence

Where attention is needed

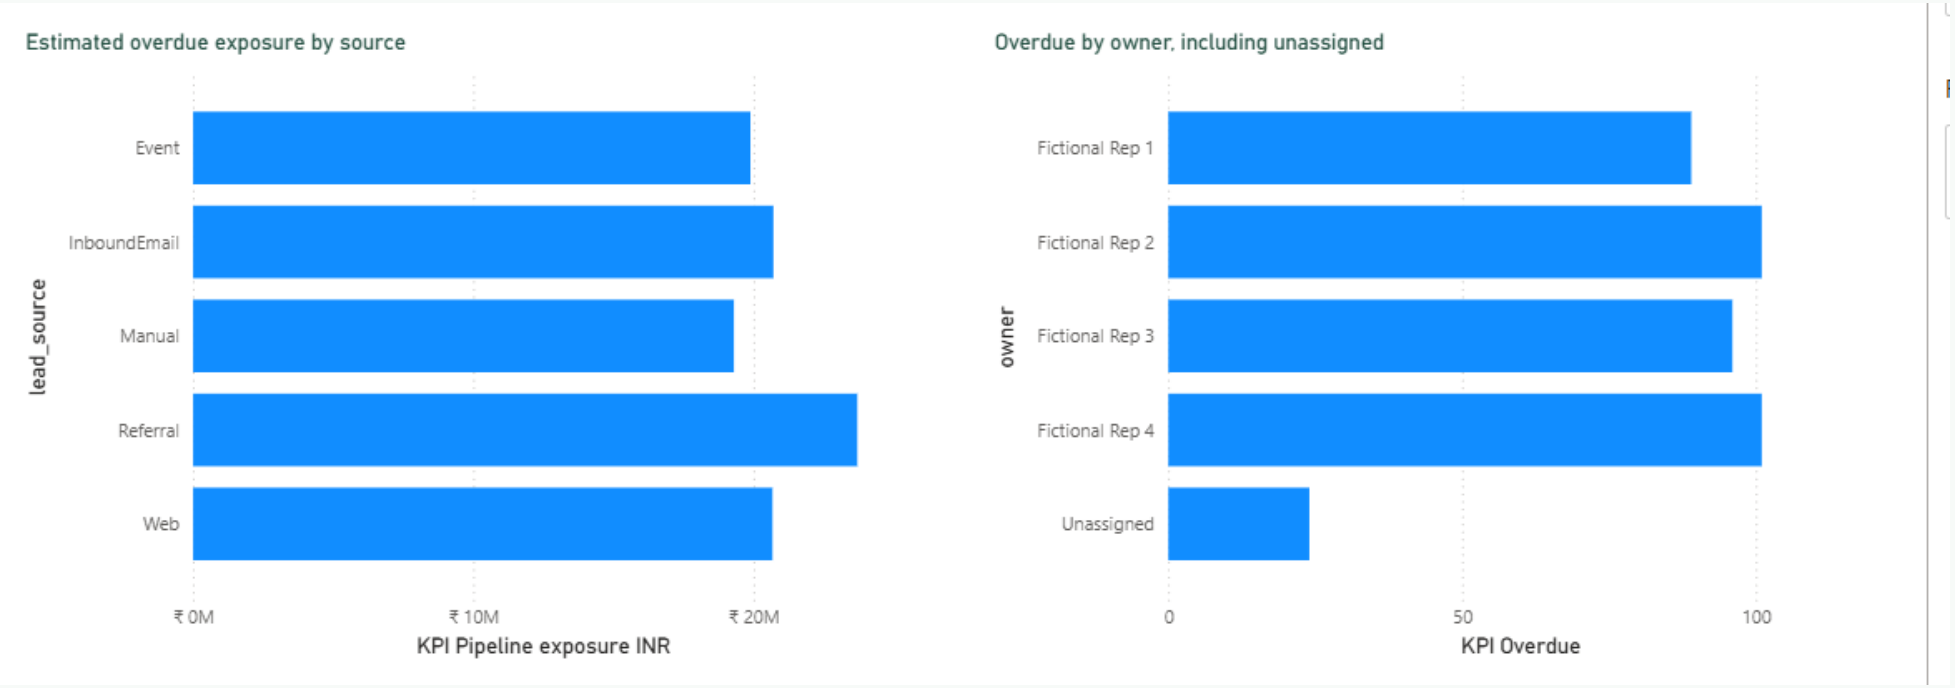

Frozen current-state cohort at 2026-10-24T15:44:29.684236Z; not historical reconstruction

Overdue / scheduled	Estimated exposure	First-response median
411 / 586	**INR 104,279,000**	**59 hours**

Exposure is an estimated open-opportunity sum. It is not lost or recovered revenue. Uncontacted leads are excluded from the response-time median.

Diagnose workload before changing source spend

SYNTHETIC portfolio case

Referral: 94 overdue

Review workload first

24 overdue unassigned

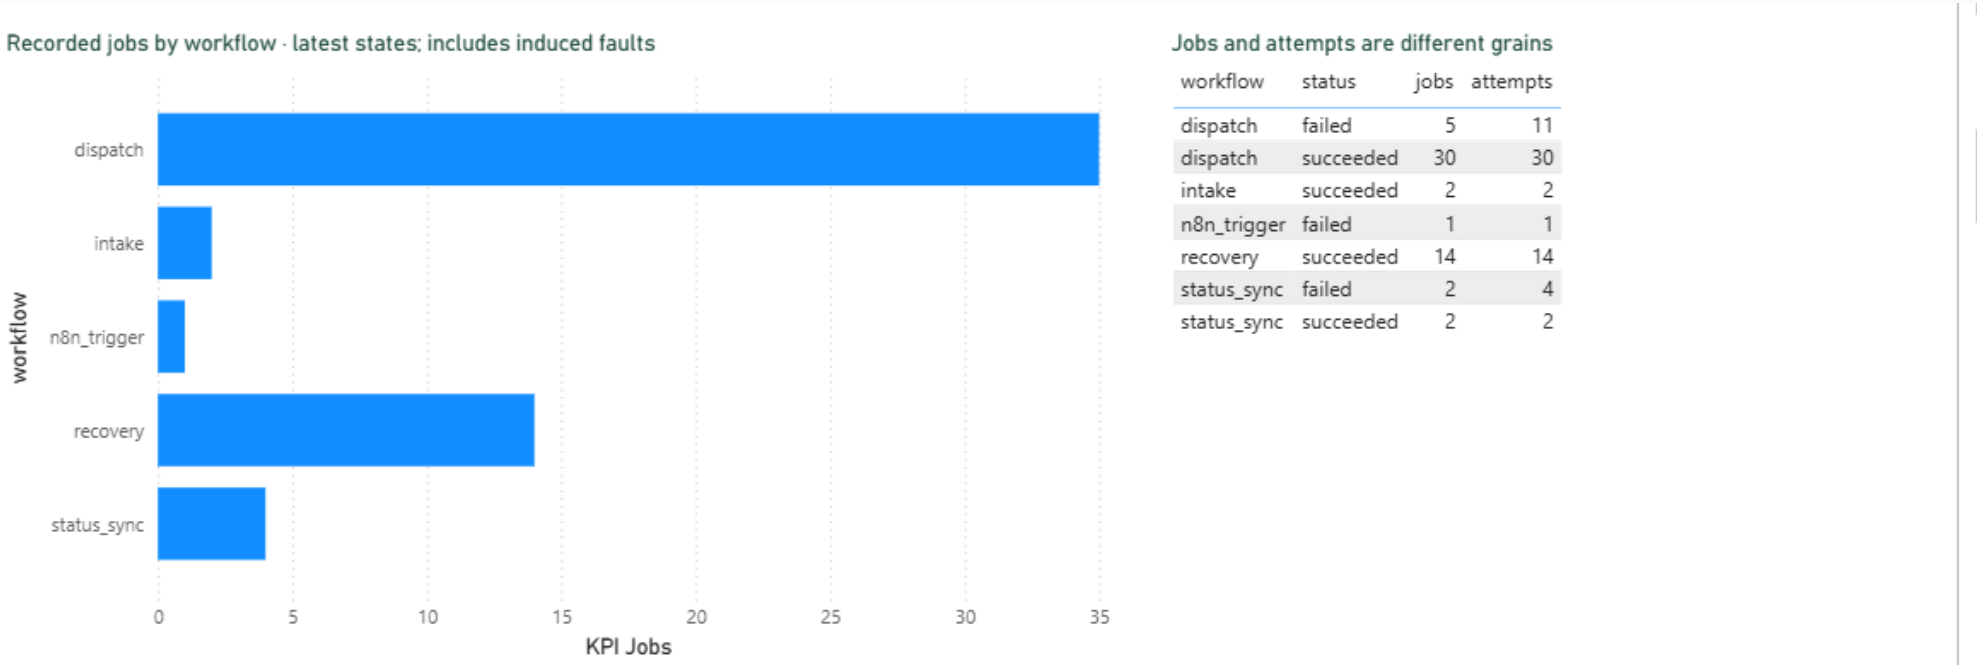

Assign the next owner

Exposure is estimated

Not recovered revenue

Four working workflows, clear approval boundaries

Intake · recovery · outbox/approval · status sync

Jobs and attempts are different grains

workflow	status	jobs	attempts
dispatch	failed	5	11
dispatch	succeeded	30	30
intake	succeeded	2	2
n8n_trigger	failed	1	1
recovery	succeeded	14	14
status_sync	failed	2	4
status_sync	succeeded	2	2

386 leads surfaced

Owner reminders reserved

6 sink-only approvals

Exact-content review

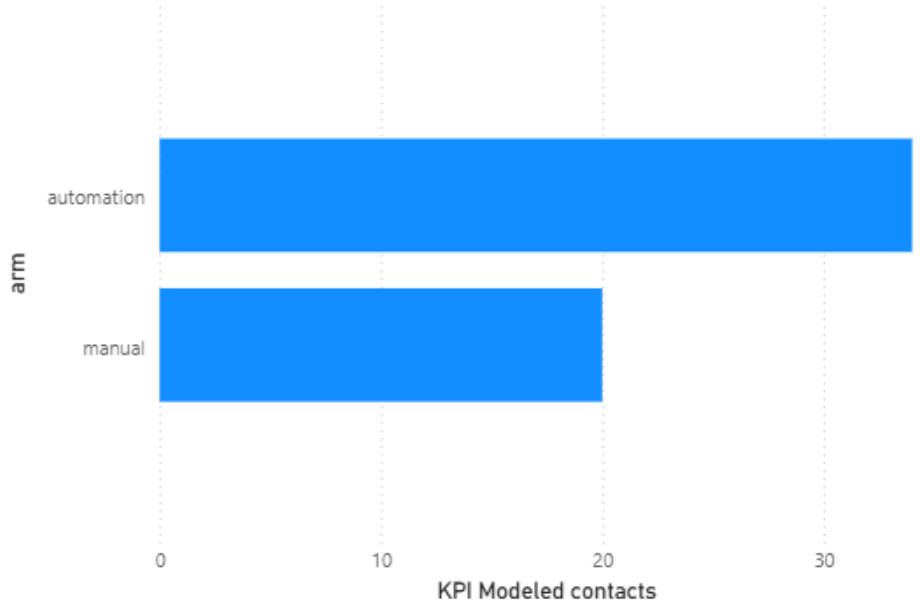

13 local sink acceptances

External sending blocked

The comparison is modeled, not a sales result

Manual reviews at hours 12 and 24; hourly automation scan; identical assumed two-hour owner response. No sales or revenue outcome modeled.

Identical 40-event cohort · assumed two-hour owner response

Incomplete tasks are not the raw overdue KPI

arm	cohort	followups_completed	overdue_remaining	action_rate
automation	40	34	6	85.0%
manual	40	20	20	50.0%

20 vs 34 contacts

Modeled at hour 24

Same 40 due events

Owner timing assumed

Raw overdue unchanged

Rescheduling still required

Trust depends on matching definitions and versions

SQL vs Python; CSV/Excel readback; Desktop DAX; pinned immutable generations

metric	application	sql	csv	excel	KPI Actual DAX	KPI SQL check
active_scheduled	586.0000	586.0000	586.0000	586.0000	586.0000	PASS
contacted	574.0000	574.0000	574.0000	574.0000	574.0000	PASS
first_response_coverage	0.7573	0.7573	0.7573	0.7573	0.7573	PASS

SQL / exports / DAX

Same snapshot and revision

Null is different from zero

Full detail in the report

Cost / benefit is a sensitivity exercise

Assumed capacity value, not observed cash savings or ROI

Assumed min saved/action	Capacity hours/month	Net capacity-equivalent INR/month
1	3.33	-800
2	6.67	200
3	10.0	1,200

Assumptions: 200 actions/month; INR 300/hour; 24 setup hours; 4 maintenance hours/month; 12-month amortization. Hardware/electricity/licensing not measured.

What a permissioned pilot should measure

SYNTHETIC portfolio case

1. Assign ownership and require a next action after contact.
2. Measure owner response and actual administrative effort.
3. Separate induced test faults from ordinary operations.
4. Track completed follow-up before making revenue claims.

Review gate and limitations

Local single-user prototype; no public deployment or external email

Synthetic data and retained test fixtures

Model assumptions are not observed business outcomes

Current-state snapshots are not time-travel reporting

Tested duplicate protection is not a universal exactly-once guarantee

Phase 6, publishing and final sign-off require separate approval.
